Subject: A literature search on PAHs and smoked foods

---

A Medline search was done to locate articles on the exposure to PAHs via smoked foods. The search strategy was

(smoked meat\* OR smoked food\*) AND (PAH OR aromatic hydrocarbons)

The majority of articles located dealt with the analysis of PAH levels in the food itself rather than the levels in humans who ate the food.

I did locate eight articles which may be of interest. The abstracts are attached for your review. Should you need copies of any of the articles, please contact Carla Gregory
